DESCRIPTION

The FM1216ME family belongs to the new FM1200 MK3 family of small size frontends, which are designed to meet a wide range of RF applications in the PC /TV Multi-Media environment. The FM1216ME combines the functions of an FM radio tuner, an all-band TV tuner, and a multi-standard TV IF demodulation unit for both positive and negative modulated TV systems. The FM1216ME is intended for CCIR L/L' (France), B/G, I and D/K systems and FM broadcast. The FM1216MP covers only CCIR B/G, D/K and I systems as well as FM radio

The frontends have a built-in digital (I²C) PLL tuning system. A DC-DC converter circuit is built-in in the FM1216ME to synthesize the tuning voltage required, thus making the frontend a true 5V device.

APPLICATION INFORMATION**DEMONSTRATION KIT**

A demonstration kit is available for the FM1216ME (software, Application Note and evaluation board). Please contact your local Sales Engineer for details about the price and availability

I²C PROGRAMMING

For information regarding general aspects of I²C bus control see 'The I²C-bus and how to use it', published by Philips Semiconductors under the code : 9398 393 40011.

The FM1216ME contains two I²C transceivers, one in the tuner part and one in the IF part. It is imperative to ensure that both I²C devices are programmed correctly according to their addresses.

If in doubt, please refer to the demonstration software.

Multi-Standard Desktop Video & FM Radio Module**FM1216ME****Tuner Part Programming (Write Mode)**BIT ALLOCATION

(WRITE MODE , R/W = 0).

Write Data	MSB	bit6	bit5	bit4	bit3	bit2	bit1	LSB	ACK
Address Byte ADB	1	1	0	0	0	MA1	MA0	R/W=0	A
Divider Byte 1 DB1	0	N14	N13	N12	N11	N10	N9	N8	A
Divider Byte 2 DB2	N7	N6	N5	N4	N3	N2	N1	N0	A
Control Byte CB	1	CP	T2	T1	T0	RSA	RSB	OS	A
Bandswitch Byte BB	P7	P6	P5	P4	P3	P2	P1	P0	A
Auxiliary Byte AB (note *)	ATC	AL2	AL1	AL0	0	0	0	0	A

Note *: By default it is set to AL2=0, AL1=1, AL0=0. This sets the tuner TOP to 112 dBuV upon power-on reset.

ADDRESS SELECTION (BYTE ADB)

Voltage at terminal 6	Address	MA1	MA0
0 0.1 V _{cc}	C0	0	0
0.2.....0.3 V _{cc}	C2	0	1
0.4 0.6 V _{cc}	C4	1	0
0.9 V _{cc} 5 V	C6	1	1

Note: If the AS pin is left floating, the internal biasing will automatically set the address to C2.

PROGRAMMABLE DIVIDER SETTING (BYTES DB1 AND DB2)

Divider ratio: $N = F_{OSC}/F_{ss}$

where $F_{OSC} = (F_{RF} + F_{IF})$ and F_{ss} is the step-size set by RSA and RSB as described below.

$$N = 8192*N13 + 4096*N12 + 2048*N11 + 1024*N10 + 512*N9 + 256*N8 + 128*N7 + 64*N6 + 32*N5 + 16*N4 + 8*N3 + 4*N2 + 2*N1 + N0$$

Note: For TV Mode: $F_{IF} = 38.9 \text{ MHz}$, except for L' mode. In this case $F_{IF} = 33.95 \text{ MHz}$
For FM Radio Mode: $F_{IF} = 10.7 \text{ MHz}$

CONTROL BYTE CBCharge Pump Setting:

CP can be set to either 0 (low current) or 1 (high current).

CP = 1, charge pump current = 280uA results in fastest tuning (default mode)

CP = 0, charge pump current = 60uA results in moderate speed tuning with slightly better residual oscillator FM. **It is recommended to set CP=0 in the FM mode at all times.**

Test Mode Setting:

T2 = 0, T1 = 0, T0 = 1 for normal operation (default)

Multi-Standard Desktop Video & FM Radio Module**FM1216ME**

T2 = 0, T1 = 1, T0 = 1 indicates that Byte AB will follow Byte CB instead of Byte BB for the current IIC Byte sequence.

PLL Disabling:

OS=0 for normal operation,

OS=1 switches off the PLL tuning amplifier (PLL tuning is disabled)

Ratio Select Bits

RSA = 0, RSB = 0 gives 50 kHz step-size

RSA = 0, RSB = 1 gives 31.25 kHz step-size (for slow picture-search)

RSA = 1, RSB = 0 gives 166.7 kHz step-size

RSA = 1, RSB = 1 gives 62.5 kHz step-size (for normal picture-search)

BANDSWITCHING BYTE BB

PORTS	P0	P1	P2	P3	P4	P5	P6	P7
LOW BAND	1	0	0	0	0	X	X	X
MID BAND	0	1	0	0	0	X	X	X
HIGH BAND	0	0	1	0	0	X	X	X
FM BAND STEREO	1	0	0	1	1	X	0	X
FM BAND MONO	1	0	0	1	1	X	1	X

AUXILLIARY BYTE AB

The AGC Take Over Point can be set by programming the following bits AL2, AL1, AL0

IF output level, symmetrical mode	Remark	AL2	AL1	AL0
115 dB μ V		0	0	0
115 dB μ V		0	0	1
112 dB μ V	default mode at POR	0	1	0
109 dB μ V	Recommended for negative modulation	0	1	1
106 dB μ V	Recommended for positive modulation	1	0	0
103 dB μ V		1	0	1
I AGC = 0	External AGC . See remarks (1).	1	1	0
3.5 V	Disabled . See remarks (1).	1	1	1

Remarks:

- 1). The AGC detector is disabled. Both the sinking and sourcing current from the IC is disabled. The AGC out-put goes into a high impedance state and an external AGC source can be connected in parallel and will not be influenced.
- 2). The AGC detector is disabled and I AGC = 9 μ A.

It is recommended to set the TOP at 109 dBmV for PAL B/G, D/K, I and NTSC M systems.

For system L/L', it is recommended to set the TOP at 106 dBmV.

For FM radio, it is also recommended to set the TOP to 109 dBmV.

Multi-Standard Desktop Video & FM Radio Module**FM1216ME****Important:**

ATC = AGC time constant.

In B/G, D/K and I modes, ATC = 1 $I_{AGC} = 9 \mu A$, time constant = 50 ms
 In L/L' mode, ATC = 0 $I_{AGC} = 220 \text{ nA}$, time constant = 2 s.

Tuner Part Programming (Read Mode)

BIT ALLOCATION (READ MODE R/W = 1)

	MSB	bit6	bit5	bit4	bit3	bit2	bit1	LSB	ACK
Address Byte ADB	1	1	0	0	0	MA1	MA0	R/W=1	A
Status Byte SB	POR	FL	1	1	AGC	A2	A1	A0	A

The following data can be read from the device through the status byte:

POR (power on reset): POR is internally set to 1 in case V_{cc} drops below 3V. The POR bit is reset when an end of data is detected by the PLL-IC.

FL: in lock flag (FL = 1 when the phase lock loop is in lock).

The loop must be phase-locked during at least 8 periods of the internal 7.8125 kHz reference-frequency (i.e. 1 msec) before the FL flag is internally set to 1.

AGC : internal AGC flag. AGC=1 when internal AGC is active (level below 3V)

A2, A1, A0 : Used for indicating if the FM signal received is transmitted in stereo or mono.

If A2 =1 and A1=A0=0, then the signal is in stereo, otherwise, it is mono.

S	START condition
Standard SLAVE ADDRESS	100 0011X where X is the value of R/W
R/W = 1	Read Mode
A	acknowledge, generated by slave

Multi-Standard Desktop Video & FM Radio Module**FM1216ME****AFC STATUS**

It is possible to monitor the AFC status via the D1-D4 bits. Thus auto search tuning for FM can be implemented by reading the AFC status through the bits D1-D4.

$F_{VIF} = F_0 + 162.5 \text{ kHz}$	1	0	0	1
$F_{VIF} \geq F_0 + 187.5 \text{ kHz}$	1	0	0	0

Note

1. F_0 = nominal F_{VIF}

AFCWIN = 1 F_{VIF} inside AFC Window

AFCWIN = 0 F_{VIF} outside AFC Window

PROGRAMMING EXAMPLES

Example 1: To tune to Ch E21 (471.25 MHz) in high band

$F_{osc} = 471.25 + 38.9 = 510.15 \text{ MHz}$

$N = (510.15 \text{ MHz}) / (62.5 \text{ kHz}) = 1F \text{ E2 (Hexadecimal)}$

So DB1 = 1F H

and DB2 = E2 H

CB = 86H if CP is set to low or CB = C6H if CP is set to high

BB = 44H (because of high band selected)

Important:

When tuning to a desired FM channel, it is recommended first to set to the TV mode at a high frequency (e.g.150 MHz), then set to FM mode (IF=10.70 MHz) and then set to the desired FM station. This is to ensure that the tuning voltage does not stay locked at 0V.

Note: Stereo Mode and Normal FM Sensitivity has been selected.

Multi-Standard Desktop Video & FM Radio Module**FM1216ME****LOADING OF I²C BUS**

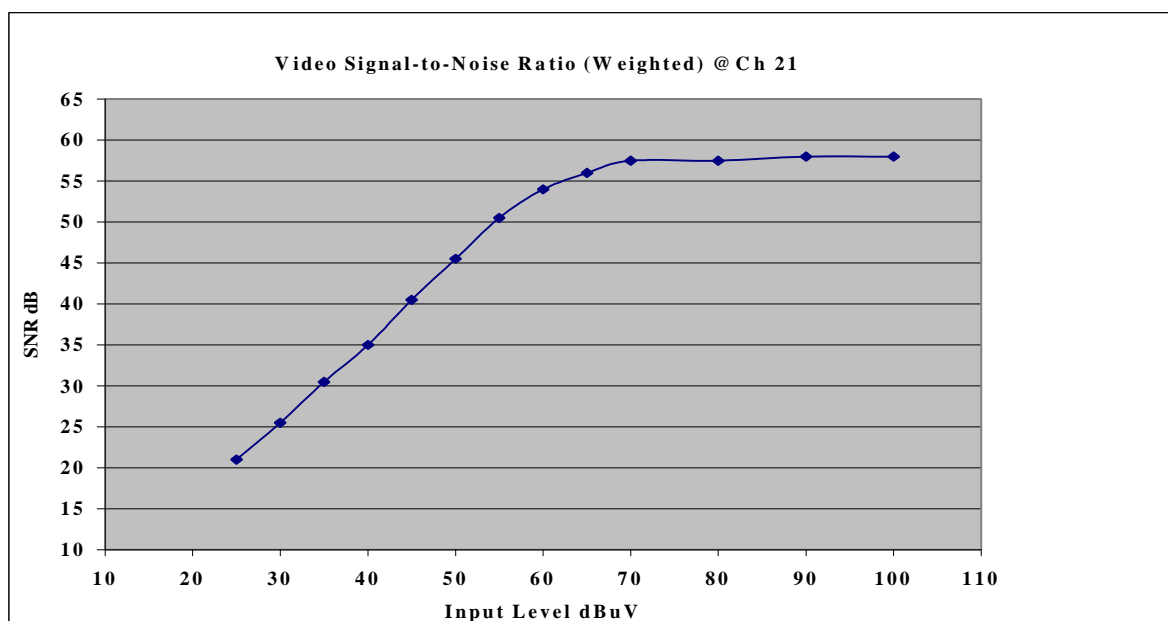

The FM1216ME contains a series impedance $R = 200$ ohms in the SCL and SDA lines. Both lines also have capacitive loads of $C = 22$ pF max. Care must be taken to ensure that the total load on the bus does not exceed that as mentioned in the brochure "The I²C-bus and how to use it".

CVBS LOAD / TUNING VOLTAGE SUPPLY

A video buffer is built into the frontend to enable the unit to drive a $75\ \Omega$ load directly (e.g. into the SAA711x directly). A DC-DC converter for providing the required tuning voltage supply is already built into the FM1216ME.

AUDIO OUTPUT AT PINS 9 & 10

The pins 9 and 10 are used to provide the FM radio stereo outputs AF_L and AF_R. For TV mode, the MONO sound output is also available at these 2 pins.

AERIAL CONNECTIONS

Standard IEC socket female 75Ω.

SOLDERABILITY

The solderability of pins and mounting tags when tested initially and after 16 hour steam ageing in accordance with "IEC 60068-2-20", test Ta, method 1 (solder bath 235°C for 2s), results in a wetted area of 95%. No de-wetting will occur when soldered at 260°C for 5s.

RESISTANCE TO SOLDERING HEAT

The product will not be damaged when tested in accordance with "IEC 60068-2-20", test Tb, method 1A (solder bath 260°C for 10±1 s).

MASS

Approximately 45g.

PACKAGING INFO

The products are packed in the carton box and transferred to customers by Pallet Transport.

	Dimension b x w x h (cm)	No. of sets	Gross Wt (Kg)
Carton	46 x 34 x 5.4	40	2.34
Pallet	120 x 105 x 105	4280	272.38

Carton Boxes are made of Corrugated Fibreboard which are free of environmentally banned substances.

ROBUSTNESS OF PINS

The pins will not be damaged when tested in accordance with "IEC 60068-2-21":

- Test Ua1, tensile of 10N in axial direction
- Test Ua2, thrust of 4N in axial direction

PUNCHING PATTERN OF CHASSIS PCB

For optimum mounting of the tuner to a PCB, the punching pattern is recommended (see 3139 149 0120).

The tuner must be mounted without clearance between the tuner supporting surface and the printed circuit board (PCB). When mounted in this way, the tuner must be soldered to the PCB. This can be achieved by pressing the unit vertically onto the PCB during soldering.
